Weekly Readme 03/07/2018

- Loaded image of a cube in 3D space in OpenGL
- Loaded image of your choice in 3D space in OpenGL

We do not have a working image of a cube, and another object, as of right now. Both OJ and I have been experiencing the same error when trying to buil/run the code. We are both using the code provided, and had to - of course - fix all the library path names, etc. We are both using different platforms to do this, but we believe we have the same issue. We are both getting a white window after compiling. Attached will be some of the error messages, and the output window that we are getting.

We will provide you with a working file/code, with the asked images in OpenGL, sometime next week. We will update our README with these once we get everything completely working.

Sorry for any inconveniences, it's been a crazy week for the both of us! Thank you for your understanding!
